PROJECT HANNIBAL // DAILY BRIEF

Sun 25 Oct 2026, 10:41 UTC · receive-only · sources NASA/JPL, SatNOGS, CelesTrak

No change since last report. Apophis EXCLUDED (orbit 220, Lisbon IMPOSSIBLE, JPL vs ESA CONSISTENT); satellites 5/7 fresh; 5 debris shells over the line.

No change since the last report (2026-10-25_0541).

1 Apophis (99942): where it won't be, where it will be

Verdict EXCLUDED. Orbit solution 220 (U=0, 7,370 observations, last 2022-04-09). Sentry: removed 2021-02-21 08:22:28.

Worst case used throughout: distances are JPL's nearest 3-sigma edge, never the nominal. Consequence if it ever did hit (upper bound: 370 m, 3.5 g/cm³, 12.6 km/s): about 1,800 Mt, 35 Tsar Bombas. The verdict above says whether it can hit; this line says what it would mean.

The bet (PREREGISTRATION 4d): Bram 28,000–29,000 km; Claude 38,008–38,015 km. Today's prediction: 38,011 km, inside Claude's range.

pass (TDB)	distance km	nearest edge km	window km	above atmos. km	verdict
2029-Apr-13 21:46	38,011	38,008	6.6	31,530	EXCLUDED
2051-Apr-20 02:05	6,206,849	5,969,533	474,687.9	5,963,055	EXCLUDED
2102-Sep-11 20:52	3,499,720	3,365,402	491,560.6	3,358,924	EXCLUDED
2116-Apr-12 21:44	2,627,073	154,849	15,452,640.3	148,371	EXCLUDED ~rough

2029 closest at 2029-Apr-13 21:45 UTC: 38,015 km from Earth's centre, over 29.0N 43.1W; 3-sigma box 2.5 × 1.7 km, ±3.3 km in range.

Impossible-event test, impact off Lisbon: IMPOSSIBLE. Closest 32,495 km at 2029-Apr-13 21:39 UTC, nearest 3-sigma edge 32,492 km (32,392 km above the atmosphere). Naked-eye from Lisbon from 19:41 UTC, up to mag 2.8.

envelope (TDB)	along km	across km	± range km	time ±
2029-Apr-13 21:46	2.5	1.7	3.3	< 00:01
2051-Apr-20 02:05	221,279.6	49.4	237,314.3	08:07
2102-Sep-11 20:52	1,887,133.1	206.7	243,130.7	15:17
2116-Apr-12 21:44	10,290,190.5	24.7	12,716,358.3	7_11:21 ~rough

1b Independent check: NASA/JPL vs ESA NEOCC (pre-registered criteria C1-C6)

CONSISTENT: JPL and ESA agree within their uncertainties, no pass reaches the atmosphere in either, and neither risk list carries the object.

Risk lists: JPL Sentry removed 2021-02-21 08:22:28; ESA not listed. JPL orbit 220 (7370 obs used, last 2022-04-09); ESA file 9577 obs, last 2022-04-09.

Yarkovsky push A2 (C6, hypothesis H-A): JPL -2.9018e-14 ± 1.9e-16 au/d², ESA -2.9001e-14 ± 2.3e-16. Matches solution 220; no radial or out-of-plane push beyond 3 sigma.

satellite	NORAD	state	last good (UTC)	age h	stations*	next pass (UTC)	DB
METEOR M-2	40069	LIVE stale	2026-10-22 08:52	74	7/25	10-25 19:27 JF6FYI Nishikazu,	in orbit
OSCAR 7 (AO-7)	7530	LIVE	2026-10-24 00:26	34	8/25	10-26 23:28 biGS	in orbit
JAS-2 (FO-29)	24278	LIVE	2026-10-25 05:27	5	8/25	10-27 00:17 Norfolk - Back Yar	in orbit

LIVE = a good decode within 30 days; stale = none in 48 h. *distinct stations among the latest good observations (SatNOGS pages cap at 25).

3 Debris cascade watch (CelesTrak SATCAT)

In orbit 35,080; working satellites 17,289; debris 12,538; rocket stages 2,298. Shells over the line: 1150-1200, 1400-1450, 1450-1500, 1500-1550, 1550-1600 km.

shell km	objects	cascade index	band
1400-1450	459	1.82	OVER THE LINE
1450-1500	501	1.54	OVER THE LINE
1550-1600	224	1.34	OVER THE LINE
1150-1200	577	1.22	OVER THE LINE
1500-1550	270	1.18	OVER THE LINE

Cascade index = objects / linearised Kessler threshold; a comparison between altitudes, never a forecast.

Generated by the Hannibal daily routine. Receive-only monitoring: nothing was transmitted. Sections that could not reach their source say NO DATA.
